

STATEMENT OF WORK (SOW)

MTS – (Mobile Application – iOS & Android)

Project Information

Project Name: MTS – Multi-Service Platform

1. Executive Overview

MTS is a scalable service-based marketplace platform connecting customers with local service providers (Plumbers, Electricians, etc.). The application includes video-based service discovery (Reels), direct contact booking, vendor subscriptions, advertisement modules, and a commission-based partner system.

2. Features

- User Module
- Vendor Module
- Agent Module

2.1. User Module

- Login via Mobile OTP
- Login via Email OTP
- No password required
- Geo-location detection & manual selection
- Service categories listing
- Search functionality
- Vendor listing view
- Call / WhatsApp booking
- Booking history tracking
- Ratings & reviews
- View vendor services
- View & share service reels
- Reels section
- Redirect to vendor profile via 'View Contact'
- Redirect to WhatsApp
- User profile
- Terms and conditions
- About MTS
- Settings

2.2. Partner (Agent) Module

- OTP-based Registration/Login
- Unique referral ID generation
- Agent can able to register them self in registration
- Agent can able register vendors by filling the form
- Agent can able get the reward in form of commission
- Agent profile section
- Settings
- Bank or upi details and withdraw request if the commission is more than assigned value
- Commission tracking (future enhancement)

2.3. Vendor Module

- Vendor can able register it self or any agent can able help by adding unique agent id
- Registration form
- Mobile/Email OTP login
- Business profile creation
- Under business profile vendor can able to Service category selection
- Upload service images/banner as per business
- Vendor listings will remain inactive and will not be visible in the application until approved by the Admin through the Admin Panel
- Edit profile & services
- Upload videos [1 MINS short videos] expire duration is 30 days
- Set availability (ON/OFF, custom time slots)
- WhatsApp/In-app chat redirect
- Vendor can able get the bookings directly WhatsApp(because we are redirecting the customer to vendor WhatsApp)
- Orders

3. Technology Stack

The technology stack for the MTS platform will be finalized and implemented at the discretion of the Developer, based on technical feasibility, scalability requirements, performance optimization, and long-term maintainability of the platform.

The proposed architecture may include:

- Frontend (Mobile Application): React Native / Flutter (or equivalent cross-platform framework)
- Backend: Node.js / .NET (or equivalent scalable backend framework)
- Database: PostgreSQL / SQL / MongoDB (based on data structure and scalability needs)
- Third-Party Integrations: Google Maps API, Razor pay (if payment integration is enabled), CDN services, SMS/OTP provider

The Developer reserves the right to select or modify the technology stack to ensure optimal

system performance, security, and scalability.

4. Development Phases & Timeline

Phase Scope Duration

Phase 1

Requirement finalization,

Documentation & SOW

Sign-off

1 Week

Phase 2 UI/UX Design &

Architecture Planning 1–2 Weeks

Phase 3

Mobile Development (User

Module) & Vendor Web

Module

3–4 Weeks

Phase 4

Booking System, Reels &

Vendor Availability

Implementation

3 Weeks

Phase 5 UAT Testing & Bug Fixing 1 Week

5. Deliverables

Upon successful completion of the project as defined in this Statement of Work, the Developer shall deliver the following:

5.1 Mobile Applications

- A fully functional, production-ready Android Application, suitable for deployment on the Google Play Store.
- A fully functional, production-ready iOS Application, suitable for deployment on the Apple App Store.

Both applications will include all approved modules, features, and workflows as defined in the finalized requirements document.

5.2 Backend Infrastructure

- Complete backend application (APIs and business logic layer).
- Database architecture, configuration, and deployment setup.
- Secure authentication and role-based access control.
- Integration with approved third-party services (if applicable).

5.3 Vendor Web Module

- Web-based vendor dashboard for profile management, bookings, availability, and content uploads.
- Administrative configuration as defined in scope.

5.4 Deployment & Launch Support

- Build generation for Android (AAB/APK) and iOS (IPA).
- Assistance with Play Store and App Store submission.
- Support during initial deployment and approval process.

- Production environment configuration support.

5.5 Source Code & Ownership

- Full source code for Mobile Applications and Backend.
- Transfer of intellectual property rights to the Client upon receipt of full and final payment.
- Deployment documentation and basic technical handover support
